

**SUPPLEMENTARY FIGURES**

**Supplementary Figure 1. siRNA mediated knockdown of TLR-3 and TLR-4 in senescent preadipocytes.** Knockdown by siRNA was confirmed by rtPCR after 2 days in senescent preadipocytes (n=3). Data are expressed as a function of scrambled siRNA-treated senescent cells; mean +/- SEM, paired 2-tailed Student's t-tests.

**Supplementary Figure 2. Pseudovirus amplifies the SASP in senescent kidney endothelial cells.** SASP factors were assayed in senescent and non-senescent kidney endothelial cells treated with pseudovirus for 96 hrs. Data are shown as a function of cell number; mean +/- SEM, 2-way ANOVA and *post hoc* comparison Fisher's LSD.
